FIRMWARE UPDATE V2.0.1

Bringing Innovation to the Table

FIRMWARE UPDATE CHANGES V2.0.1 MAY 2023

The new firmware version will further improve how the new Merrychef easyTouch 2.0 controller operates. multiple minor 'bugs' have been addressed and fixed.

Noticeable improvements include:

USB File structure:

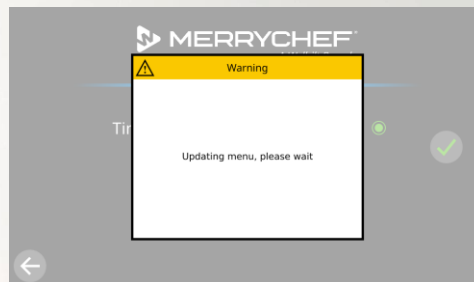

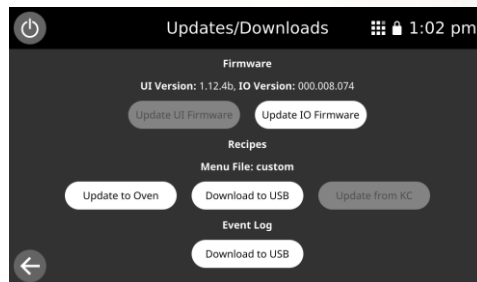

- A USB stick will now recognise menu and firmware files, either in the existing Welbilt file system OR as a:

Zipped menu file with the ending .mccb This ending will be automatic on an oven download but ANY menu package name can be renamed with the ending .mccb

For firmware the .tar file only will be recognised by the oven.

USB updates for firmware and menus

- When a USB stick is inserted, the oven will recognize any menu or firmware files that are on the stick. There will be an onscreen option for you to choose what you want to up-date.

Guide to connectivity status

The icons below appear in the navigation bar

Ethernet

Grey icons =
Check your router
connection

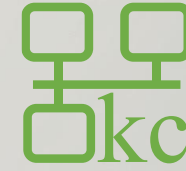

Wi-Fi

Red icons =
Router connected
Check your internet
connection

Ethernet

Amber icons =
Internet connected,
sign up to KitchenConnect

Wi-Fi

Green icons =
Fully connected
to KitchenConnect

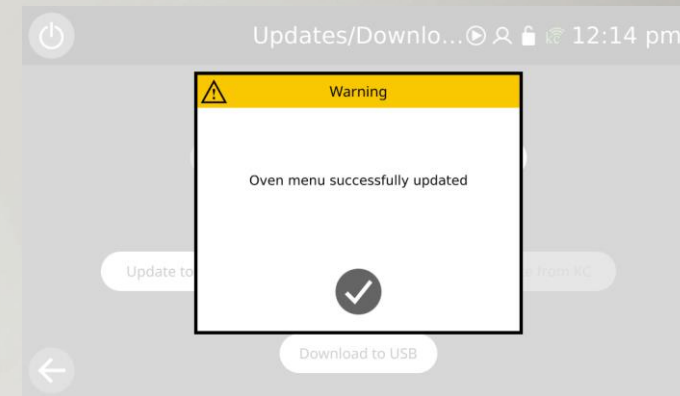

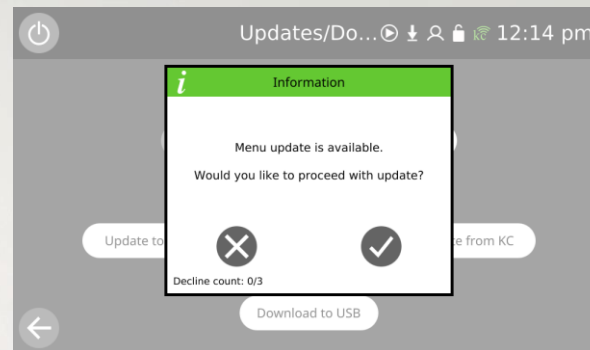

FIRMWARE UPDATE CHANGES V2.0.1 MAY 2023

KitchenConnect remote update for menus and firmware:

- A white arrow appears in the navigation bar when a download from KitchenConnect is available.

- For remote transfer from KC, the oven will display a pop up on restart asking you to accept either a menu or firmware update. There will be x3 opportunities to accept this (on restart) before the update will be applied automatically.
